

Rahul Gupta

MOBILE LEAD · FLUTTER & CROSS-PLATFORM · AI INTEGRATION

Jaipur, India | rahul3099gupta@gmail.com | +91 78918 48737 | [linkedin.com/in/rahul-gupta-894602188](https://www.linkedin.com/in/rahul-gupta-894602188)

SUMMARY

Flutter developer with 4+ years building and shipping production cross-platform apps, currently the Mobile Lead at a custom-software firm that delivers business systems to 50+ clients across healthcare, logistics, hospitality, and fintech. Comfortable owning a product end to end — from offline-first architecture and native device integrations to release. Also focused on practical AI integration — using the Gemini API and prompt engineering to build AI-powered features and internal tools.

SKILLS

MOBILE	Flutter, Dart, GetX, BLoC, get_it, Drift, sqflite, ObjectBox, Firebase (Auth, Realtime DB, Messaging, Crashlytics), geolocation, biometric auth, offline-first sync, REST API integration, in-app purchases (Razorpay)
AI	Google Gemini API integration, LLM / API integration, prompt engineering, building AI-powered app features
LANGUAGES	Dart, Python, C, C++, Java
TOOLING	Git, Dio / Postman, Chrome Extensions (Manifest V3)

EXPERIENCE

Sublimity Softwares Pvt. Ltd.

Jaipur, India

Flutter Developer → Mobile Lead

Dec 2021 – Present

- Lead mobile development across multiple shipped client products; own architecture and native integrations, and mentor a team of Flutter developers.

FireArrest — Offline-first field-inspection & fire-safety compliance platform (Flutter, BLoC, Drift/sqflite, WorkManager, Dio)

- Led development of one of the team's largest mobile codebases: an offline-first app letting inspectors capture pin-level photo evidence, complete dynamic forms, and sync reliably with conflict handling once back online.
- Built the offline background-sync engine on WorkManager and foreground services, plus dynamic form rendering, on-image annotation & markup, QR scanning, and in-app PDF report viewing.
- Shipped and actively maintained to v8.x as a production client product.

ClockedIn Mobile — Attendance & time-tracking app (Flutter, GetX, geolocator, local_auth, Firebase)

- Built employee clock-in/out with PIN codes, geofencing, and biometric login, plus granular permission handling and offline sync.
- Implemented custom schedules, a real-time attendance dashboard, push notifications, and in-app update checks for a shipped enterprise product (team of 6+).

Sentinel — Internal API-monitoring tool with a Gemini-powered assistant (Google Gemini API, prompt engineering)

- Built an internal API-monitoring tool and integrated a Gemini-powered chat assistant that answers questions and generates draft test cases and documentation from prompts.

HRM OTM — Multi-tenant HR & leave-management app (Flutter, GetX, ObjectBox, OAuth2, MinIO/S3)

- Contributed leave / balance tracking, clock-in/out, and reporting across a two-client multi-flavor build.

Earlier work

- Built a Manifest V3 lead-automation Chrome extension that extracts and filters B2B sales leads with rule-based heuristics; and Rankplus, a Class 8–12 / JEE / NEET exam-prep app with live lectures, mock tests, and Razorpay payments, plus reception-management and food-delivery apps (Flutter, Firebase).

AI / SELF-DRIVEN PROJECTS

AI App Collection — ~12 small AI-powered tools built on the Gemini API (Python)

- Built around a dozen small tools on the Gemini API using prompt engineering — including chatbots, content generators, a document Q&A helper, and an image-analysis demo.

EDUCATION & TRAINING

B.Tech, Computer Science

2017 – 2021

Global Institute of Technology, Jaipur · 69%

Training: Python & Django (GIT Jaipur; 45-day summer program). · Languages: Hindi (native), English (professional working proficiency).
